

changePan

`changePan(noteID, pan, relative, immediateOrDuration)`

Description

Function to change the position of a specific note in the panorama.

Available in: Processor.

Arguments

noteID	The ID of the note that you want to change.	number
pan	The absolute pan position in the range of -1.0 to 1.0 (<code>relative = false</code>) or the value which is added (<code>relative = true</code>).	number
relative	The value is added to the current amount if this is set to <code>true</code> . The default is <code>false</code> .	boolean, optional
immediateOrDuration	Change the value immediately or in the specified duration. Set this to <code>true</code> to change the value immediately without controller smoothing. Set a duration in milliseconds to change the value with controller smoothing in the specified time. If not set, this setting defaults to <code>false</code> and the controller smoothing setting in the Options editor is used.	boolean or number, optional

Example

```
-- pan notes depending on MIDI note
-- E3 = center, E2 = hard left, E4 = hard right
function onNote(event)
  local pan = (event.note - 64) / 12
  local id = postEvent(event)
  changePan(id, pan, false, true)
end
```
