

setParameterNormalized

```
setParameterNormalized(nameOrID, value)
```

Description

Function to set the value of a parameter in the normalized range from 0 to 1.0. The parameter can be determined by name or ID. This function has no effect if the parameter does not exist or if the value is of the type string.

Available in: Controller, Processor.

Arguments

nameOrID	The name or ID of the parameter.	string or number
value	The value you want to set in the normalized range from 0 to 1.0.	number

Example

```
-- set the normalized value of the parent layer's level parameter
function onLoadIntoSlot()
    this.parent:setParameterNormalized("Level", 0.5) -- set via name
    this.parent:setParameterNormalized(38, 0.5) -- set via ID
end
```
